The Mountain of Tomorrow

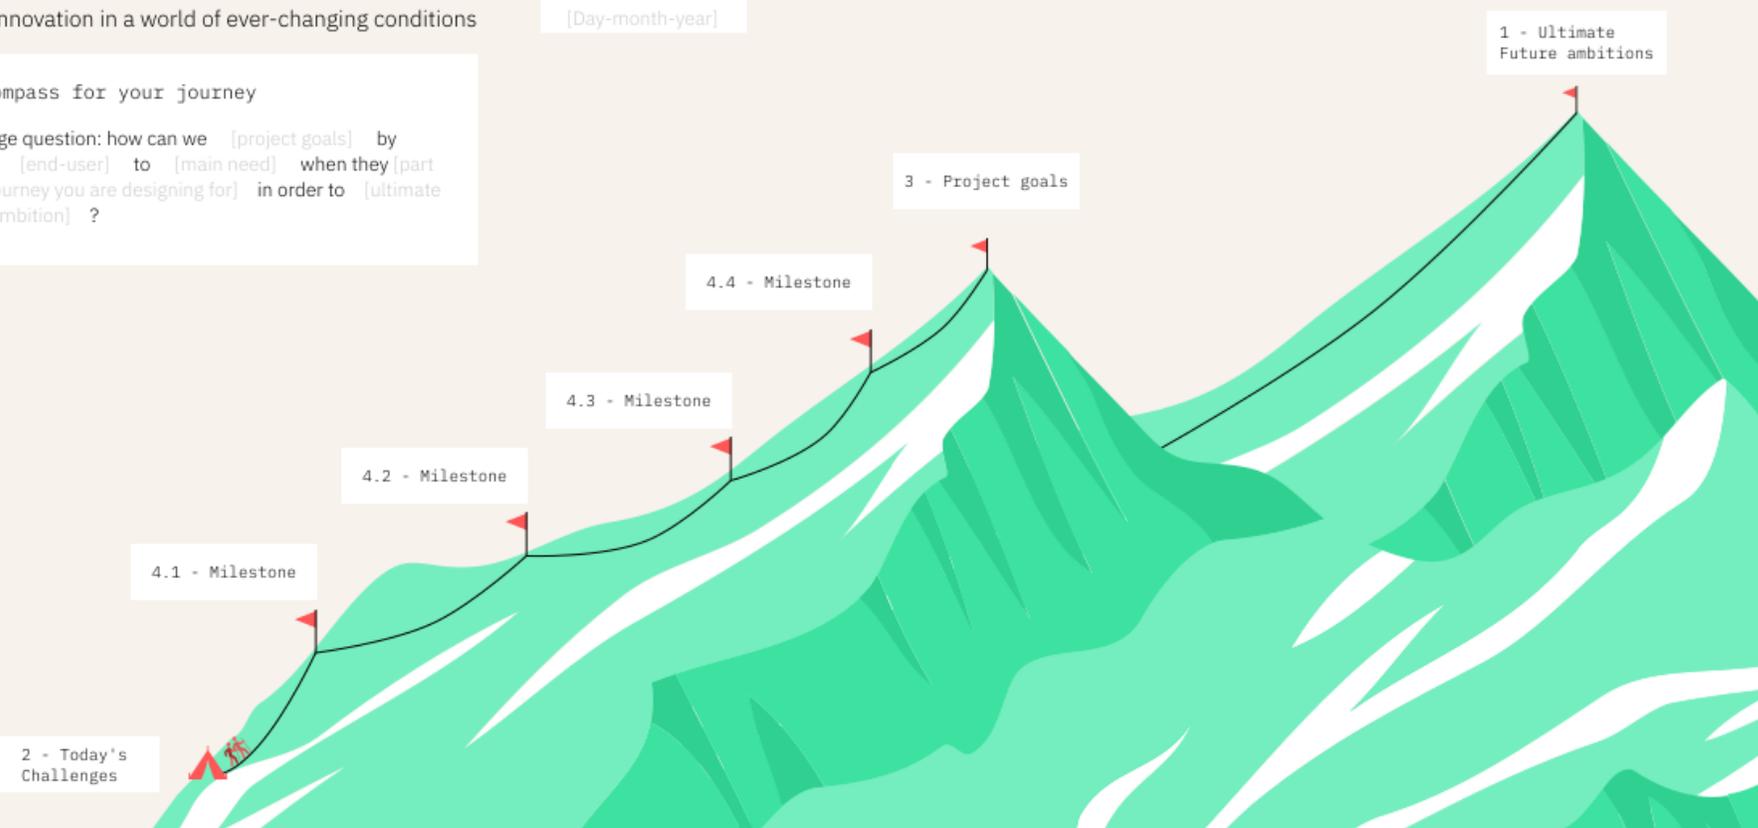

Guiding innovation in a world of ever-changing conditions

Project end date

[Day-month-year]

The compass for your journey

Challenge question: how can we [project goals] by helping [end-user] to [main need] when they [part of the journey you are designing for] in order to [ultimate future ambition] ?

1 - Ultimate future ambitions
 What are the ultimate future ambitions for your initiative / organisation ?

2- Today's challenges
 What challenges do your end-user(s), organisation and society as a whole face?

3 - Project goals
 What goals do you want the project to reach? What do you want to create and learn? Who will benefit and how?

4- Project Milestones and sprints
 Which milestones and activities can you distinguish towards your project goals?

Climbing Equipment
 What mindset, knowledge, data, skills and resources do we need to reach our goals?

Way of working
 Who do we need to involve from within and outside our organisation to make this project a success? How will we collaborate?

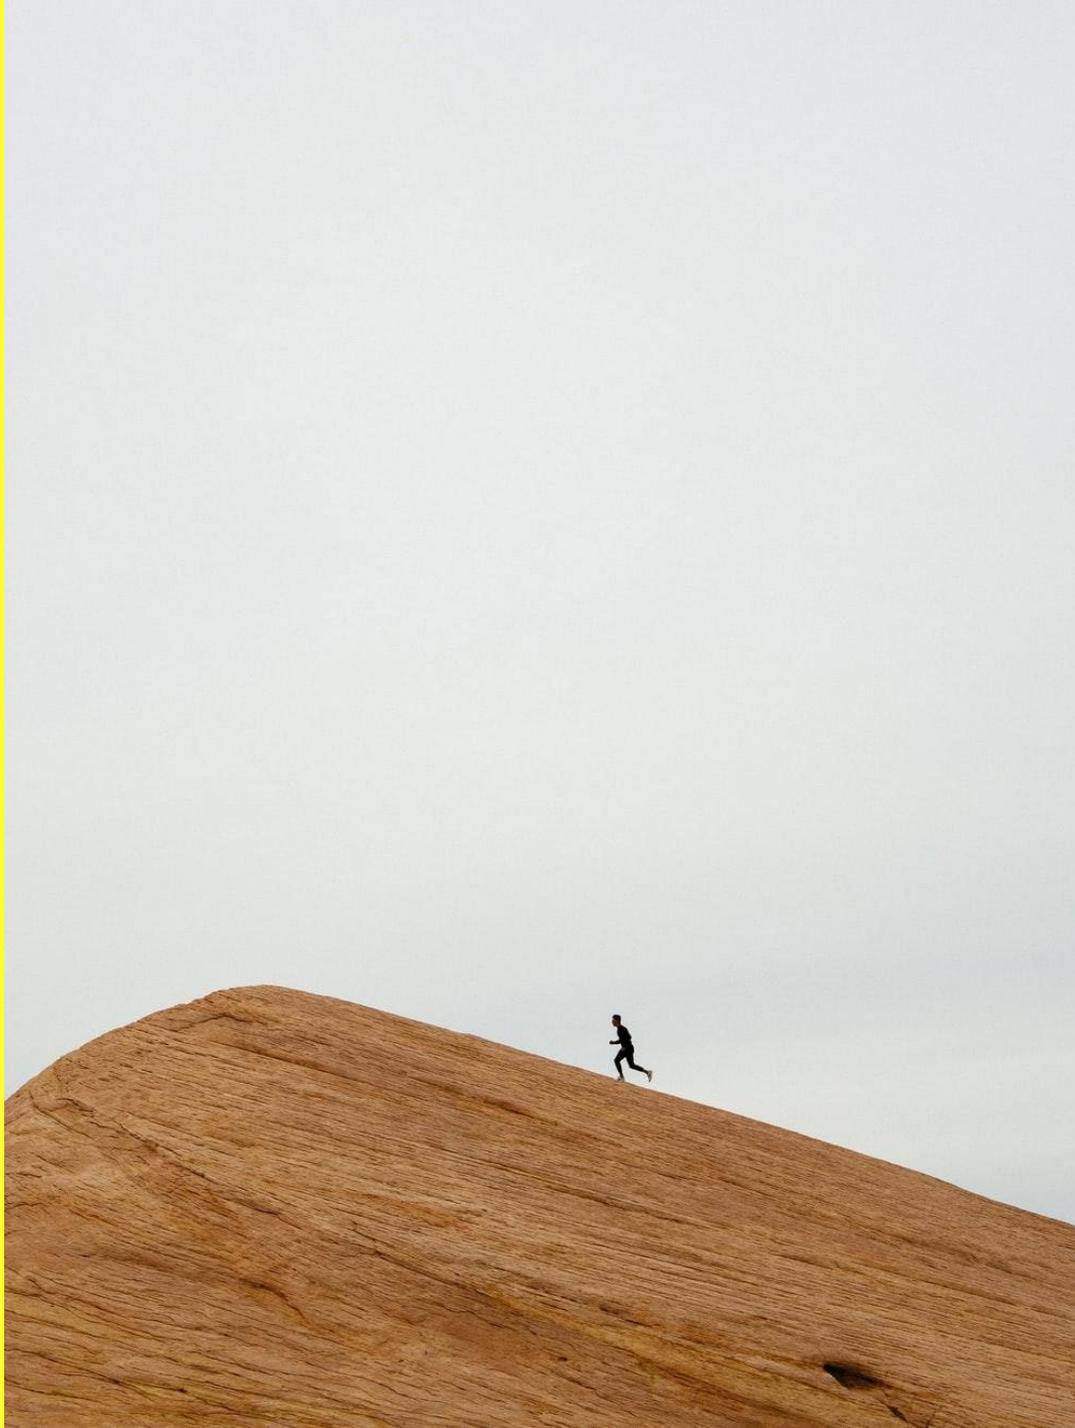

Context HAP

After the participating HAP organizations have explored the challenge, gathered insights, expressed a call for help and have committed partners to jointly work on innovative solution, it is now the time to get into action together.

Purpose Mountain of tomorrow

The mountain of tomorrow has been designed to create clarity, momentum and shared project commitment at the start of your collaboration. Especially when you start an innovation or co-creation project between different individuals, departments or organizations that haven't worked together yet, it is important to scope and align your project goals and operationalize your roadmap together. The canvas will help your move from ideas into concrete steps and actions to achieve (first) impact & learnings.

Mountain runs

The mountain of tomorrow is used as a working document for the GET phase of the HAP program. Mentors will facilitate three mountain runs for all teams separately (including their partners) in between the collective HAP workshops to ensure a structured and aligned kickstart for the new partnerships, shape a collaborate long term vision and create focus and concrete results in the short run.

Mountain run 1
Align ambitions
and ways of
working

Mountain run 2
Operationalize for
short term impact
and learnings

Mountain run 3
Pivot and refine
your plans to scale
your impact

Mountain run 1 - Steps

1. Agree upon the collaboration challenge question - the compass of your journey together.

Use the question you already have defined earlier and make sure all the partners are on board to work on solutions for this challenge or refine to ensure commitment.

2. Define the long-term ambition of your potential solution

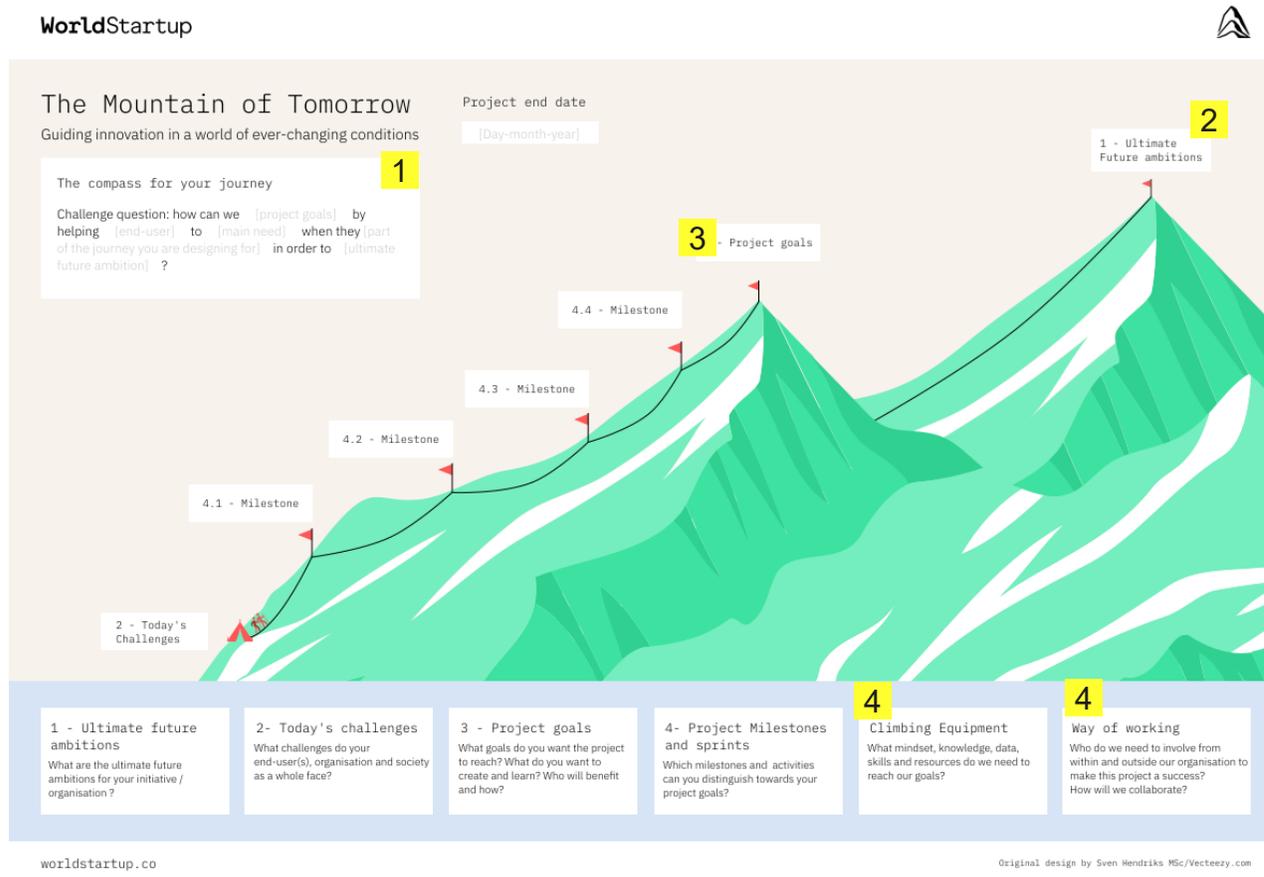

Imagine your collaborate impact in 5-10 years. What do you really hope to accomplish in the long run? Be bold and wild because anything can happen in 5-10 year.

3. Define your collaborate project goals within a time-frame of about one year.

What goals do you want your partnership to reach in the upcoming year? What do you want to create and learn? Who will benefit and how?

4. Commit on resources and ways of working

What mindset, knowledge, data, skills, and people within and outside your organization to you need to reach your goals

General Info

- Full project team (including all partner(s)) need to be present
- 90 minutes workshop
- 100% online using Miro & teams (or similar)
- Preparation time mentor 2 hours

Mountain run 2 - Steps

1. Explore the challenges your project is focused on resolving

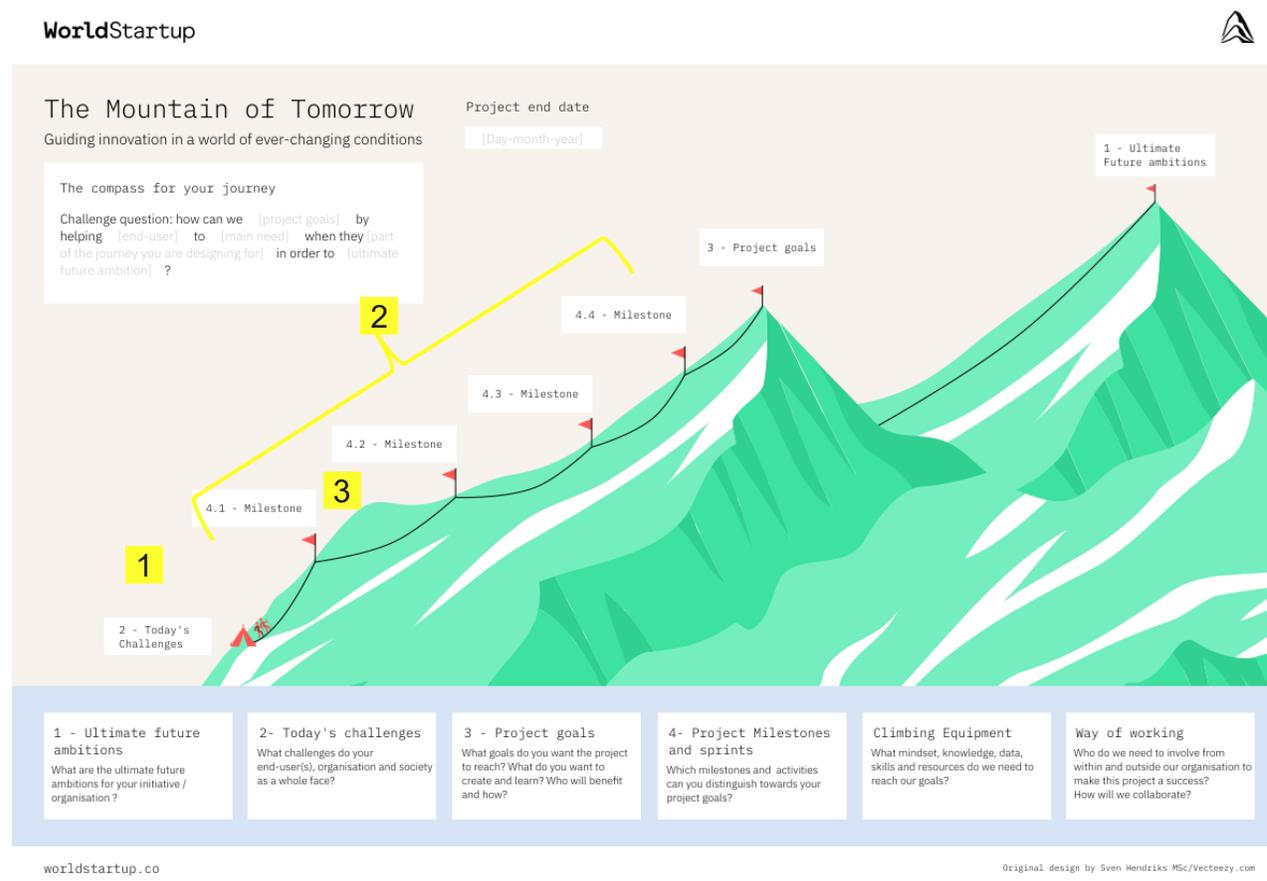

Think about challenges users of your solutions are facing and the hurdles you might need to overcome in trying to solve it

2. Break your projects goals(approx. 1 year) up in a few milestones to get there

Take in consideration that your first milestone is about preparing and setting up a user involvement and your second milestone are the first results and learnings of this user involvement in the beginning of April when there is a go/no go decision to continue your effort together. Yet do look beyond the April scope and think how you can achieve your one-year project goals

3. Define and operationalise your sprint till the beginning of April (HAP program).

Decide on a focus for your user involvement and define concrete actions to plan and prepare. What needs to be ready in a month to get into action on the ground? Next what is our planned outcome of those activities? What do we hope to learn and accomplish?

General Info

- Full project team (including all partner(s)) need to be present
- 90 minutes workshop
- 100% online using Miro & teams (or similar)
- Preparation time mentor 2 hours

Mountain run 3 - Steps

1. Adjust your project goals and milestones

Based on your learnings and activities you can pivot your plans for the upcoming months to achieve your projects goals (or strive for other results due to new insights)

2. Envision beyond the year

Think about how the next years might look like to get closer to your collective ultimate ambition

3. Start defining the resources you need for the upcoming month

It might be valuable to also think about a strategy to make those resources available; who do we need to convince and how do we promote the impact and learnings so far?
