

Problem & Solution Stakeholder Mapping

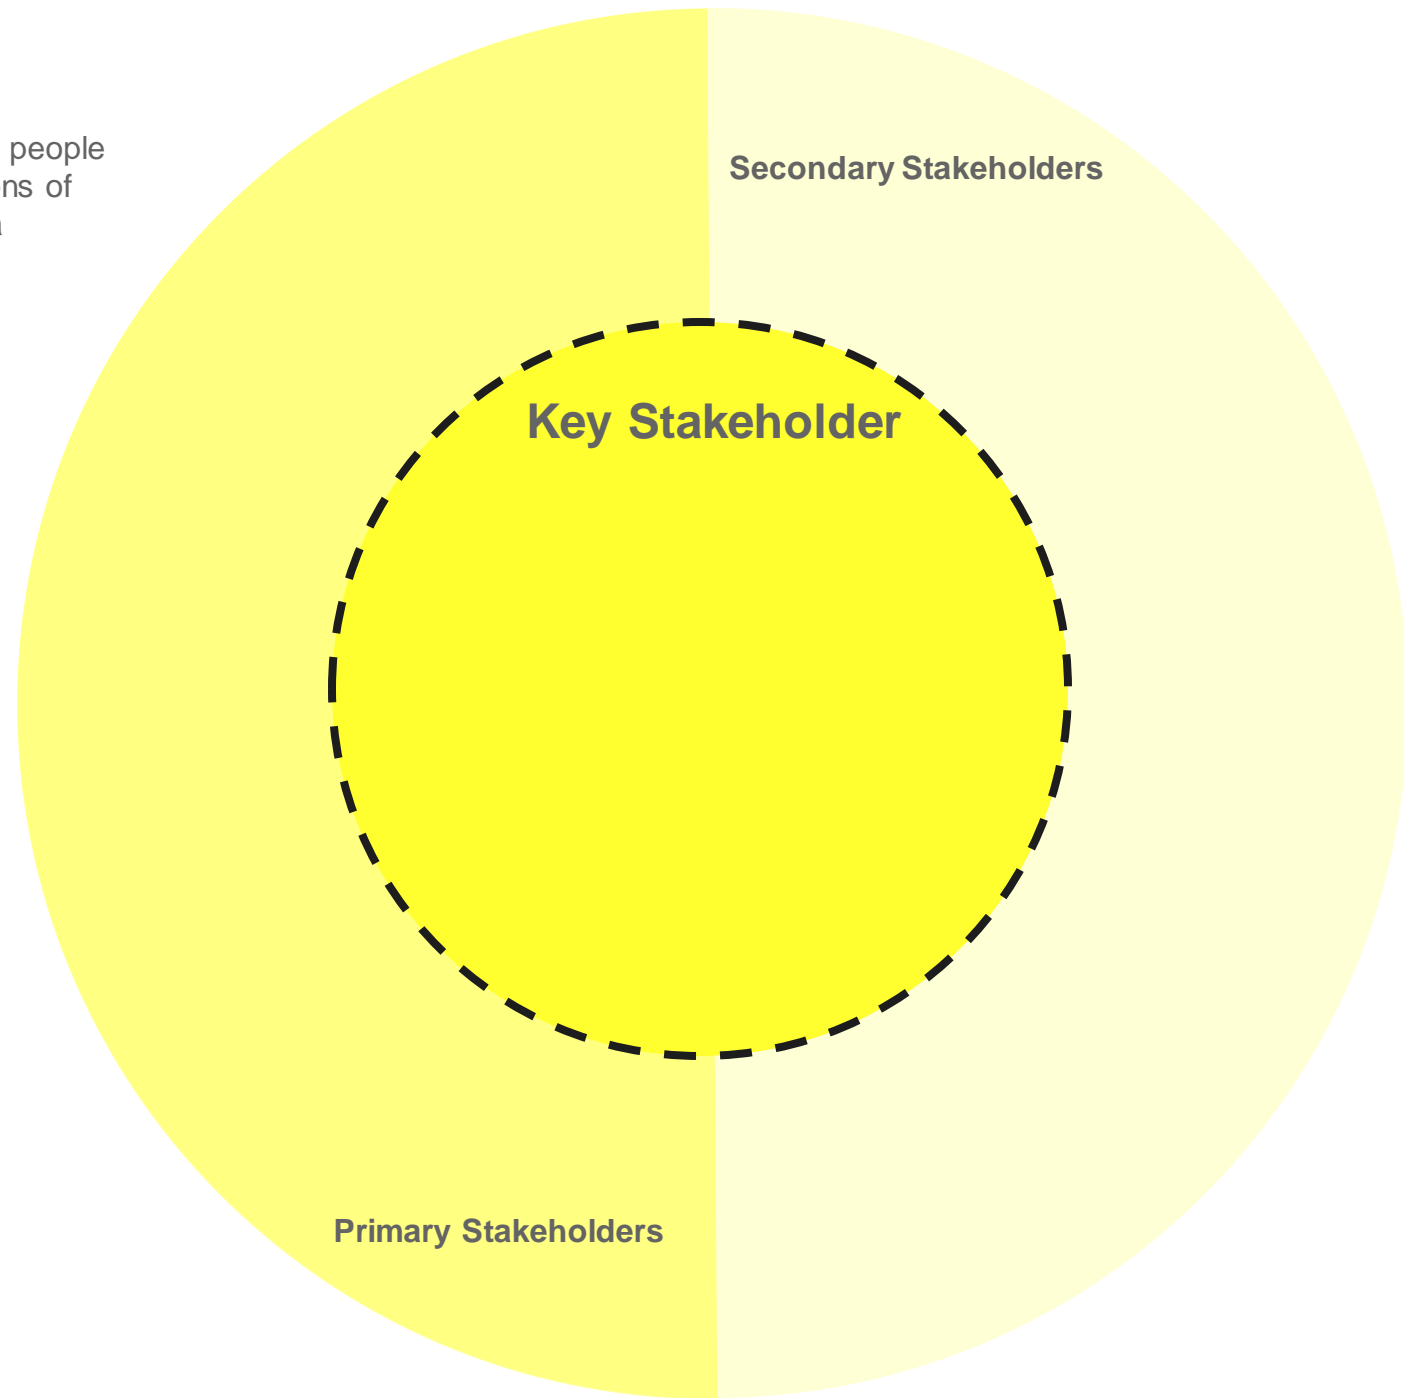

Stakeholder analysis is a useful tool for assessing which people are impacted regarding the problem and potential solutions of your innovation effort. Your stakeholder map should be a working document as it is useful to revise periodically,

We propose to categorize three groups in line with the [HIF innovation guide](#):

Primary stakeholders: Who is directly impacted or has a direct influence regarding the potential solution?

Secondary stakeholders: Who is impacted indirectly by the potential solution but is impacted by the problem? (eg, children in a classroom would be affected by quality of teaching, but would not be involved in a teacher training solution)

Key stakeholders: Who are the most influential and important stakeholders overall?
